NAME – AVISHI PATIDAR

REGISTRATION NO. – 25BAI10071

BRANCH – ARITIFICIAL INTELLIGENCE AND MACHINE LEARNING

YEAR – 1ST

COURSE CODE – CSE0001

DATE – 27/03/2026

INTRODUCTION

As a newly appointed Student Digital Ambassador, I have undertaken this project to develop a comprehensive Digital Literacy Portfolio. The core objective of this role is to assist my peers in navigating the complexities of the digital landscape, ranging from building professional online identities to ensuring safe and responsible communication. This project serves as a foundational resource that I will present to the faculty committee and share with my batchmates to promote digital awareness.

The project is structured into five distinct modules, each focusing on a critical aspect of modern digital life: visual communication, professional networking, technical collaboration, formal etiquette, and cybersecurity. By utilizing various browser-based tools like GitHub, Canva, and HackerRank, I have documented my journey in a centralized repository to demonstrate practical proficiency in essential digital skills. This report serves as a detailed reflection of the tasks completed and the insights gained throughout this learning process.

TASK – 1

For the first task of my Student Digital Ambassador role, I created a one-page infographic using Canva to explain digital literacy in a simple way for my batchmates. The main idea was to make the topic easy to understand at a glance, so I focused on three parts: what digital literacy actually means, some useful digital tools students can use, and basic rules for safe internet usage along with email etiquette.

While designing it, I chose a clean template and added icons so that the content doesn't look too text-heavy. I also tried to keep the layout simple so anyone can quickly read and understand it without getting confused.

What I found interesting was that digital literacy is not just about knowing how to use devices, but also about how we communicate and stay safe online. Honestly, the hardest part for me was fitting so much information into one page without making it look messy. I had to remove and adjust a lot of content.

Overall, this task helped me understand how important it is to present information clearly, especially in digital formats.

TASK – 2

For this task, I worked on building my professional digital presence by creating and updating my profiles on GitHub, LinkedIn, and Kaggle. On GitHub, I made a simple profile README where I introduced myself by mentioning my name, branch, and current year of study. It felt like a good way to start putting myself out there in the developer community.

On LinkedIn, I focused mainly on completing my academic details, like adding my degree and university, so that my profile looks more complete for future use. I also explored Kaggle because I'm interested in data-related projects, and it seemed like a good platform to practice and learn.

I chose these platforms because each one serves a different purpose—GitHub for coding projects, LinkedIn for professional connections, and Kaggle for improving practical skills in data science. Over the next few years, I plan to regularly upload my work on GitHub and slowly build connections on LinkedIn for internships. I also want to try Kaggle competitions when I get more confident.

Starting early made me realize how important it is to maintain a good digital presence from the beginning.

TASK – 3

In this module, I practiced using platforms that are important for technical collaboration and data collection. For Part A, I used the coding platform HackerRank to solve a beginner-level Python problem. I completed the “Solve Me First” challenge, which helped me understand how the platform works, especially how to write code, run it, and submit it for testing. It was a simple task, but it gave me confidence to explore more problems in the future.

For Part B, I worked with Google Forms to create a quiz titled “Digital Literacy Awareness Quiz.” I included five questions using both multiple-choice and short-answer formats to check basic knowledge about online safety. While making it, I also learned how to structure questions clearly.

These tools will be really helpful in my academics. HackerRank can improve my problem-solving skills with regular practice, which is important for coding subjects. At the same time, tools like Google Forms and Sheets can help me collect and organize data for projects. As a Digital Ambassador, I feel more confident using these platforms and guiding others as well.

TASK – 4

For this module, I focused on improving my professional communication skills and understanding how to maintain proper boundaries in digital interactions. I drafted two emails—one to request an assignment deadline extension from a professor and another to express interest in a summer internship. While working on these, I realized how important it is to have a clear subject line, proper greeting, and a short, respectful message.

I also created a “Social Media Do’s and Don’ts” checklist to help students maintain a professional image online. This activity made me understand that even small mistakes in communication can create confusion or leave a negative impression.

One important habit I will adopt is proofreading my messages before sending them. Overall, this task helped me become more aware of how I present myself online and the importance of maintaining a polite and professional tone.

TASK – 5

While researching this topic, what surprised me the most was how simple tricks are used in cyber fraud, especially in UPI scams. I realized that many people lose money not because of technical hacking, but because they are unaware or act in a hurry. Even a small mistake like clicking on a link or entering a PIN without thinking can lead to serious consequences.

One habit I will personally change is being more careful before making any online payment or clicking on links. Earlier, I didn’t always double-check payment requests, but now I understand how important it is to verify everything. I will also make sure not to share sensitive information with anyone, no matter how genuine they seem. This task made me more aware and responsible while using digital platforms.

CONCLUSION

Completing this Digital Literacy project has been a transformative experience for my first year as a B.Tech student. Serving as a Student Digital Ambassador allowed me to move beyond basic computer use and truly understand the responsibilities of a professional online presence. From mastering version control on GitHub to researching the complexities of UPI fraud prevention, I have gained a diverse set of skills that are essential for both my academic and future professional career. This project reinforced that digital literacy is a continuous journey of learning and adaptation. I now feel better equipped to navigate the digital world safely and to assist my peers in doing the same.
